ABSTRACT OF THE DISCLOSURE

An improved structure of a casing for a wireless LAN PC card (previously known as a PCMCIA) includes a cover and a frame; the cover being related to a plate having at its both sides downwardly folded with multiple clamping and insertion bits; those clamping bits slightly inclined inwardly facing the center of the cover; multiple locking grooves and insertion holes to match those clamping bits and insertion bits being provided on the frame; upon pressing the cover onto the frame, those clamping bits and insertion bits being locked to their respective clamping grooves and insertion holes to firmly incorporated the cover to the frame.
